

Amendments to the Specification

Please replace the last paragraph on page 8, beginning at line 19, and continuing over to page 9, line 3 with the following text:

The web proxy server 24 is coupled to, and communicates with the target web site 22 through a Hypertext Transfer Protocol (HTTP) fetch and cache component 36 34 of the proxy server 24. The target web pages can be located on a range of computers, computer systems, and networks. For example, the information can be stored in local databases, on an Intranet, or on the Internet. The fetch and cache component 34 of the web proxy server 24 stores the web pages that are returned from the information source 22 in response to the user request. A wireless transport layer 40 42 at the web proxy server 24 then sends the information over the relay network 26, through the wireless network connection 30 to the viewing device 28.
